

Mobile Clients

Version 5.3

Datasheet

Important at last – with Mobile Clients from TELES

When traveling, you remain in touch thanks to your mobile. However, for business travelers, there is an obvious drawback: You are either available for everyone while traveling – or for no-one.

TELES Mobile Clients solve this problem because they allow you to get calls made to your landline number too – no matter where you are. You can decide at any time and at any place whether calls should be passed on to your mobile, to the mailbox or a number of your choice. Outgoing calls can be made via VoIP or GSM. The landline number is always displayed – the mobile number is only given to really important contacts.

These applications transform your mobile phone into an extension and provides access to all the usual comfort functions – while you're traveling as well as when you're at the office. That's what you call "state of art" working.

BENEFITS AT A GLANCE

- Transforms the mobile phone into an extension (BYOD) with access to contacts and Unified Messaging
- Smooth transfer from landline to mobile phone
- One landline number, available everywhere
- Automated and central roll-out simplifies provisioning
- Individual user interfaces
