

Data Server

○ Datasheet

The unerring traffic police for your network

The TELES Data Server enables Softswitch operators to set up their own set of routing policies, and it simplifies routing management. The main benefit of having a Data Server is the enhanced performance and capacity of routing lookup services.

Additionally, the Data Server enables a wide range of useful and convenient applications such as Wholesale Routing (Routing Prefix Setup), User-Class Routing (Subscriber-based Routing), Number Portability and Access Control Lists. A dynamic, flexible table class allows building of customized applications.

BENEFITS AT A GLANCE

- Improved routing maintainability
- Manages up to 100M routes
- Enables Number Portability and real time routing changes
- Provides centralized Network Route Management
- Allows sophisticated Wholesale Routing applications

CAPABILITIES

Supported Softswitch Versions	3.7 and later
-------------------------------	---------------

Max. entries for user class	up to 100 million
Max. entries number portability	up to 100 million
Max. entries wholesale routing	up to 100 million
Max. entries flexible routing	up to 100 million
Performance	4 million BHCA

SYSTEM MANAGEMENT

EMS

Open SQL interface

SSH (Remote System Administration)

PLATFORM

Hypervisor	VMware ESXi 6.5 or later
Operating System	CentOS 7
